Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 23 is rejected under 35 U.S.C. 103(a) as being unpatentable over Sawaragi et al., U.S. Patent # 5,314,947 in view of Takeshita et al., U.S. Patent # 6,057,039 for the reasons outlined in the correspondence dated July 9, 2004.

Applicant argues the validity of the proposed combination references on the grounds that the comparative example in the Sawaragi document, which illustrates the deleterious effects of excluding the metal oxide component, teaches away from the addition of colloidal silica to their invention.

It is the Examiner's position that the Applicants have misconstrued the probative value of the comparative example. Whereas the Applicants purport that this experiment is used to illustrate the negative effects of the incorporating silica on the refractive index of the composition, the Examiner believes, instead, that it is offered only to demonstrate that the metal oxide is essential for obtaining a high refractive index although the comparative example is also useful because it indicates that the abrasion resistance of the composition is enhanced by the addition of silica while the metal oxide sometimes underperforms in this capacity. In fact, there is no evidence in the Sawaragi reference whatsoever to support the conclusion that silica has a negative impact on refractive index. The comparative example only corroborates the notion that a metal oxide is essential to obtain higher refractive indices.

Allowable Subject Matter

Claims 1-22 and 24-35 are now considered to be in condition for allowance.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
